**STANDARD INTERLOCKING RULES 601 TO 685, INCLUSIVE,  
 SUPPLEMENTED BY THE FOLLOWING SHALL GOVERN  
 IN THE USE OF THE AUTOMATIC INTERLOCKING  
 PLANTS.**

**INTERBAY.**

Trains on MAIN LINE will approach Home Signals under control and if PROCEED signal is obtained will proceed over the crossing at a speed of not to exceed fifteen miles per hour.

If train on main line is stopped at a Home Signal and no conflicting train movement is evident, trainman shall proceed to crossing and operate push button and slow hand release located in iron box marked "RELEASE" locked with standard switch lock. Turn knob to the right until stopped, hold a few seconds and let go. Clockwork movement will return pointer to the zero or NORMAL position after a period of from one to two minutes. Under ordinary conditions the completion of the return movement should cause home signal to indicate PROCEED. If home signal desired does not indicate PROCEED trainman may flag train over crossing after making certain that conflicting home signals are in the STOP position and no conflicting train movement is evident.

**SWITCHING LEAD.**

For train movements over the crossing on Great Northern switching lead, trainman shall proceed to the crossing and after making certain that no conflicting movement on the Northern Pacific is under way, shall operate PUSH BUTTON located in iron box marked PUSH BUTTON, which will, if indications are correct, cause Northern Pacific signals to assume STOP position, permitting Great Northern switching lead signal to indicate PROCEED after lapse of approximately one minute.

If the operation of the PUSH BUTTON for switching lead movements fails to obtain PROCEED signal, trainman shall operate PUSH BUTTON and SLOW HAND RELEASE located in iron box marked RELEASE locked with standard switch lock. After operations required in the RELEASE box have been performed the switching lead PUSH BUTTON must again be operated to obtain PROCEED signals.

If operation of SLOW HAND RELEASE and PUSH BUTTON does not clear the Home Signals desired, trainman at crossing, after having made certain that Home Signal on conflicting line are at STOP and no immediate train movement is evident, may signal train to PROCEED over the crossing.

**B. C. E. RAILWAY CROSSING  
 1.84 Miles South of Still Creek.**

If a train is stopped by a home signal and no immediate conflicting train movement is evident, trainman shall proceed to the crossing and operate hand release located in iron box marked "RELEASE" and locked with a standard switch lock. Turn knob to the right until stopped, hold a few seconds and let go. Clockwork movement will return pointer to zero or "NORMAL" position after a period of from one to two minutes. Under ordinary conditions the completion of the return movement should cause home signal to indicate "PROCEED."

If smash board on Great Northern route is in PROCEED position and operation of hand release does not clear the home signal desired, trainman may signal his train to proceed over the crossing, after making certain that home signals and smash boards on the B. E. Electric line are in stop position and no immediate conflicting train movement is evident.

If smash board on Great Northern route is not in the PROCEED position and operation of hand release does not clear the home signal desired, trainman shall operate smash board to PROCEED position by hand and may then, if home signal desired does not clear, signal his train to proceed over the crossing, after making certain that home signals and smash boards on the B. C. Electric line are in STOP position and no immediate conflicting train movement is evident.

**To Operate Smash Board Mechanism.**

Located at the crossing, in an iron box marked "RELEASE," locked with a standard switch lock, is a crank for operation of smash board mechanism by hand. Crank should be taken out of box and inserted in shaft on back of operating mechanism after opening small door locked by a standard switch lock. Crank should be turned slowly and uniformly until movement has made its entire stroke and smash board has been moved to PROCEED position. Crank should then be removed and RETAINED UNTIL ENTIRE TRAIN HAS PASSED SMASH BOARD, when it must again be locked in the crank box.

**NEW WESTMINSTER SEMI-AUTOMATIC.  
 FRASER MILL SPUR CROSSING AND CROSSOVER TO  
 WATERFRONT LINE.**

Great Northern train movements over Fraser Mill spur crossing will be governed by manually operated gates. G. N. route over Fraser Mill spur crossing will be set manually after obtaining release of electric lock holding gates in STOP position.

Great Northern train movements from Main Line to Waterfront Line over C. P. R. crossing will be governed by indicator and electrically operated lock on main line switch stand. Great Northern route from main line to Waterfront Line over the C. P. R. crossing will be set manually after obtaining release of electric lock holding main line switch in normal position. Both ends of this long crossover are handled by the main line switch stand.

To unlock gates or switch, trainman shall open lock box locked with standard switch lock and if light indicator is burning, push operating button. If the semaphore indicator in the lock box indicates CLEAR at close of this operation, gates or switch may be unlocked by raising the handle under the indicator to the vertical position. Handle must be left in this position until gates or switch are closed after train movement is completed, when it must again be placed in the NORMAL position before door of the box can be locked.

If pushing the operating button does not bring about the above operation and no conflicting train movement on the C. P. R. is evident, trainman shall operate time release provided in box marked "RELEASE" and locked with a standard switch lock. Turn knob to the right until stopped, hold a few seconds and let go. Clockwork movement will return pointer to zero or NORMAL position after a period of from one to two minutes. Under ordinary conditions the completion of the return movement should release the electric lock as indicated by the Semaphore indicator.

**SPECIAL RULES.**

Rule 671 to 671 (f), inclusive, amended as follows:

The speed of trains through the Approach and Home signal zones of an interlocking plant shall not exceed thirty miles per hour.

Trains moving against the current of traffic on double track through interlocking plants, or where governed by dwarf signals shall not exceed eight miles per hour.

Conditions may require a further speed restriction for all trains, per special rules, and at draw bridges the speed of trains shall not exceed eight miles per hour.

The letter "T" in column headed "SIGNS" indicates interlocking plant.
