Yard Limits: Portola—West board (M.P. 319.94) 1875 feet west of west switch to No. 10 track.

Fast board (M.P. 323.00) 4105 feet cost of cost switch to Lea

East board (M.P. 323.09) 4105 feet east of east switch to Ice House track.

Doyle—West board (M.P. 361.58) 4283 feet west of west switch to siding.

East board (M.P. 364.22) 5561 feet east of east switch to siding.

Gerlach-West board (M.P. 437.03) 3323 feet west of west switch to

yard. East board (M.P. 439.45) 3998 feet east of east switch to

House track.

Winnemucca—West board (M.P. 530.02) 4317 feet west of west switch to extension No. 1. track.

East board (M.P. 533.62) 4468 feet east of east switch to Depot

Reno Junction is register station for Nos. 219 and 220 only.

Westward

Westward second-class and extra trains need not check register at Reno Jct. for No. 219.

When passenger trains meet at Portola or Winnemucca, siding adjacent to main track in front of depot, will be used by train taking siding, unless otherwise specified by train order.

Loyalton Branch Crossing M. P. 328.1. Protected by signals which, in normal position, block Loyalton Branch track with gates connected with signals. Trains must approach with caution expecting to find signals at stop and crossing occupied.

Automatic Block Signals govern movement of trains through Tunnel 37.

Home Signal 3402 located 450 feet west of West Portal. Home Signal 3415 located 566 feet east of East Portal. Distant Signal 3419 located 1730 feet east of Home Signal 3415.

Overlap controlling Home Signal 3415 and Distant Signal 3419 indicated by overlap post located 1500 feet west of Home Signal 3402.

Reno Junction: Switch indicators connected with block signals are located at head blocks of west siding switch and west main track switch of cross-over. (See Rule 504 C, Figures 1 and 3, and Rule 512.)

S. P. Crossing, (Flanigan) M. P. 384.3, interlocked. Interlocking signals located 550 feet east and west of crossing. Distant signal for eastward movements located 3226 feet west of interlocking signal. Distant signal for westward movements located 2500 feet east of interlocking signal.

Trains finding interlocking signals at "Stop" will be governed by Rule 663.

★No. 102 leaves Elko on 3rd, 9th, 15th, 21st and 27th of each month.

Eastward

+No. 48 leaves Elko on 6th, 12th, 18th, 24th and 30th of each month.

For special instructions applying to joint tracks between Weso and Alazon, see page 7.

Yard Limits: Elko—West board (M.P. 663.60) 4127 feet west of west switch.

East board (M.P. 666.76) 3527 feet east of east switch to Old
Main track.

Wells—West board (M.P. 716.30) 4120 feet west of west switch to siding.
 East board (M.P. 719.16) 4319 feet east of east switch to siding.

Shafter—West board (M.P. 764.96) 4253 feet west of N. N. Ry. crossing. East board (M.P. 767.72) 4319 feet east of east switch to siding.

Wendover—West board (M.P. 805.29) 3580 feet west of west switch to South siding.

East board (M.P. 808.21) 4177 feet east of east switch.

When passenger trains meet at Wendover, the siding in front of depot will be used by train taking siding unless otherwise specified by train order.

RULE 72. No. 102 is superior to other eastward first-class trains.

RULES 86 and 93. First-class trains must clear the time of Streamliner No. 102 not less than ten (10) minutes, and other trains and engines must clear the time of Streamliner No. 102 not less than fifteen (15) minutes.

Salt Lake—West board (M.P. 926.06) 1000 feet west of L. A. & S. L. crossing, M.P. 926.3.

> X overs at know , Lover,

When passenger trains meet at Wendover, siding in front of depot will be used by train taking siding unless otherwise specified by train order.

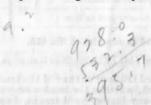

Burmester siding is track south of main track, east of depot.

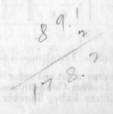

Eastward and westward freight trains will enter and leave D. & R. G. W. freight main tracks at 1st South Street through connection at Pollard Jct. Eastward trains will enter right-hand track at a point about 150 feet east of 1st South Street, which point is designated by sign as end of double track and at this point westward trains will leave double track. There are three switches at west end of double track and normal position of these switches is lined for eastward Western Pacific trains. Westward trains must line up these switches in accord with their normal position for eastward main track. Trains operating against current of traffic on either of the two main tracks must do so under flag protection. Eastward trains approaching 21st

South Street will sound four medium blasts of engine whistle for purpose of calling Yardmaster's attention to approaching train so arrangements can be made to head train into clear track.

Time specified in time-table or train order at Pollard Jct. for second-class and extra trains will apply at west end of D. & R. G. W. double freight main tracks. A first-class westward train which does not reach Pollard Jct., Salt Lake, within 15 minutes from its leaving time, as registered at Union Station, Salt Lake, must run expecting to find a train moving ahead, Pollard Jct. to Delle.

B. & G. Crossing (B. & G. Transfer) M.P. 912.1, interlocked. Interlocking signals located 561 feet east and 619 feet west of crossing. No distant signals. Trains finding interlocking signals at "Stop" will be governed by Rule 663.

Rule 11-A ASPECIAL INSTRUCTIONS

RULE 19. Diesel-powered streamlined train "City of San Francisco" is equipped with two red bull's-eye lights countersunk nearly flush with roof of rear car, which burn continuously and serve as markers.

RULE S-72. Westward trains are superior to eastward trains of the same class except as noted on Page 6.

RULE 104 (A). Conductors and engine foremen must personally know that main track switches used by them are locked after clearing main track for Diesel-powered streamlined train "City of San Francisco."

RULE 338. Helper engine may be used behind caboose in Nevada and Utah, and behind a 605 series caboose in California. When so used, air must be cut through between caboose and helper and train stopped when over summit to detach helper. Helper engines must not be used behind other than 605 series cabooses in California.

RULE 927. TRAIN INSPECTION-When not restricted otherwise, conditions being favorable and in judgment of Conductor it is safe, freight trains may run from one water stop to next water stop for inspection, except as follows:

First Subdivision: All trains must be inspected at Gerlach. Eastward freight trains that do not inspect or take water at Doyle and which have not been inspected between Chilcoot and M. P. 412 must take water and inspect at M. P. 412; that do not inspect or take water at Jungo and which have not been inspected between Sulphur and Pronto must take water and inspect at Pronto.

Westward freight trains that do not take water or inspect and which have not been inspected between Winnemucca and Antelope, must stop at Antelope for inspection; that do not take water or inspect at M. P. 412 and which have not been inspected between Gerlach and Doyle must stop for inspection at Doyle. However, helper trains stopping to add helper engine at Jungo or Sulphur will, ordinarily, make standing inspection at those points and in that case, additional stops for sole purpose of making standing inspection will not be necessary. If time required to complete standing train inspection at Jungo and Sulphur, after helper engine is added, would prevent train from making next siding for opposing trains, inspection need not be made at those points, but will be made as outlined in preceding paragraphs.

Third Subdivision: Eastward freight trains that have not been inspected between Deeth and Shafter must stop at Shafter for inspection and must stop at some point between Silver Zone and Wendover for inspection, or rolling inspection may be made if, in judgment of Conductor and Engineer, it is safe to do so.

Above instructions will not conflict with provisions of Rule 928.

Westward freight trains must come to a stop at Alazon and, after complying with Rule 1165, make rolling inspection.

RULE 1155. At terminals where brake pipe has not been separated on passenger trains, terminal air brake test need not be made.

RULE 1156. Rear end plug test need not be made after detaching helper engine used behind caboose.

Rear end plug test must be made on eastward Southern Pacific trains at Elko when continuity of brake pipe has been changed.

When doubleheading and lead engine is to be detached from train, air must be set by lead engine and stop made before being detached, then train engine must fully release air brakes and regain full working pressure before proceeding.

Where air connections have not been disturbed back of engine next to train, it will not be necessary to make rear end plug test.

MISCELLANEOUS

DOUBLEHEADING: First Subdivision: Between Portola and Doyle, engines heavier than one Mallet (M-100 Class) and one Consolidation (C-43 Class) must not be doubleheaded.

Second Subdivision: Between Weso and Elko; two Mallet engines (SP or WP) must not be doubleheaded; Two S.P. engines heavier than S.P. types F-3, 4 and 5 must not be doubleheaded.

Third Subdivision: Between Elko and S.P. connection (M.P. 701), two Mallet engines (SP or WP) must not be doubleheaded. Two W.P. engines heavier than one W.P. Mallet (M-100 Class) and one Consolidation (C-43 Class) must not be double-

When two Mallet or two engines heavier than those specified above are handling trains (or being towed) in above territories, they must be separated by five (5) cars.

Ordinarily engine helping train on either side of Low Hill will be given running orders from point at which helper engine is to be detached. When it becomes necessary to detach helper engine from train before reaching point indicated in train order, crew of train which is being helped must protect movement and must stop at meeting point and notify opposing train or trains that helper engine is following.

Delleker: Narrow gauge bridge crossings over main spur, old dock, new planer and No. 3 tracks, Feather River Mill, must be opened before track is used. Look out

Figures given for capacity of sidings and spurs is the number of cars averaging 48 feet in length that tracks will hold between clearance points, not including engines and cabooses.

USE OF JOINT TRACKS BETWEEN WESO AND ALAZON, INCLUSIVE

- (A) Between Weso and Alazon, tracks of Southern Pacific Company and Western Pacific Railroad will be used jointly. All eastward trains of both companies will use Western Pacific track, and all westward trains of both companies will use Southern Pacific track, unless otherwise instructed by train-order, except as provided in Rules U and Z hereof. Each railroad will be operated under single track rules.
- (B) When a block signal indicates "Stop", eastward trains on Western Pacific and westward trains on Southern Pacific will be governed by Rule 509, applicable to double track.

Where eastward signals on Southern Pacific and westward signals on Western Pacific are maintained, trains stopped by such signals will be governed by Rule 509, applicable to single track.

(C) Dispatchers will use following forms to authorize movement of eastward extras on Southern Pacific track, and westward extras on Western Pacific track; or to create work extras on either track:

Example	1-"Eng	_run ext	tra on		_Pacific tra	ck	to	
Example	2-"Eng	_works	extra	on	Pacific	track_	M	unt
_	M between_		_and		"			

(D) Eastward regular trains and westward Western Pacific first-class trains will register by ticket at Weso. Other trains will not register.

Operator Weso will enter on register information furnished by register ticket and will transmit only the registration of Southern Pacific eastward first-class trains to Western Pacific operator at Winnemucca, who will enter same on register.

Eastward Western Pacific first-class trains will register by ticket at Western Pacific Carlin and operator will enter same on joint register at Southern Pacific station, Carlin. Eastward Southern Pacific trains will register on joint register at Southern Pacific Carlin. A first-class eastward train which does not reach East Carlin within 15 minutes from its leaving time as registered, will run expecting to find a train running ahead of it, East Carlin to Elko.

Eastward Southern Pacific first-class trains may register by ticket at Elko. Eastward Southern Pacific second-class and extra trains will not register at Elko. Last paragraph Rule 96 will not apply when sections of second-class trains are created at Western Pacific Elko.

At Southern Pacific Elko only first-class trains will register and they will do so by ticket. Registration of first-class trains will be transmitted to Western Pacific operator at Elko who will enter same on register. A first-class westward train which does not reach West Elko within 15 minutes from its leaving time as registered at Southern Pacific Elko, will run expecting to find train running ahead of it, West Elko to Carlin.

All eastward Southern Pacific trains and westward regular Southern Pacific and Western Pacific trains will register at Alazon by ticket.

- (E) Rule 83 will not apply at Weso, Carlin and Elko as between trains of the same class.
- (F) Rules 83, 83 (D) and 206 (A) will not apply to Southern Pacific trains at Western Pacific Elko, but they will be governed by train-order signal, and at Carlin will be governed by train register and second paragraph of Rule 83 (B).
- (G) Rule 83 (B). When an eastward schedule or section is checked on register at Imlay or Western Pacific Winnemucca, or after having been passed between Imlay and Weso by a regular train, it will not be necessary to check register at Weso against the same train.

When an eastward schedule or section is checked on register at Carlin by a Southern Pacific train, or at Elko by a Western Pacific train, or after having been passed between Carlin and Alazon by a regular train, it will not be necessary to check register at Alazon against the same train.

(H) Rule 96. Sections of regular trains may be created Weso to West Carlin or Carlin on Western Pacific tracks.

Second paragraph of Rule 83 (B) will not apply at Carlin to work extras and westward extras on Western Pacific tracks. Such trains must not leave Western Pacific Carlin until it has been ascertained whether all regular trains due have arrived or left.

(I) Rules 83 (D) and 206 (A). A clearance authorizing an eastward Southern Pacific regular train at Weso will apply only to Carlin, where another clearance must be obtained authorizing train Carlin to Alazon.

(J) Rules 83 (D) and 206 (A). Eastward Southern Pacific extra trains will obtain clearance at Alazon. Other Southern Pacific trains will be governed by train-order signal.

(M) When trains on which crew changes are made on Western Pacific track at Carlin are departing, they must move with caution not exceeding 12 miles an hour until reaching a point where next signal indication can be clearly seen and intervening track can be seen to be clear.

Southern Pacific Rule 21 (D) will not apply to Southern Pacific and Western Pacific engines on Southern Pacific track between Alazon and Weso.

(A) Rule 83 (B). When a westward schedule or section is checked on register at Wendover by a Western Pacific train, or after having been passed between Wendover and Alazon by a regular train, it will not be necessary to check register at Alazon against the same train.

(N) Rules 83 (D) and 206 (A.) A clearance authorizing a westward Western Pacific first-class train at Alazon will authorize such first-class train Alazon to Carlin. A clearance authorizing a westward Western Pacific second or third-class train at Alazon will apply only to Elko where another clearance must be obtained authorizing such train Elko to Carlin.

Rule 96. Sections of second and inferior class trains may be created Alazon to Elko on Southern Pacific tracks.

Second paragraph of Rule 83 (B) will not apply at Elko to work extras and east-ward extras on Southern Pacific tracks. Such trains must not leave Elko until it has been ascertained whether second and inferior class trains due have arrived or left.

Third paragraph of Southern Pacific Rule 220 will apply to westward Western Pacific first-class trains at Southern Pacific Elko.

(Q) Palisade, E. N. Ry. Crossing, M.P. 635.4, interlocked.

Interlocking limits—Western Pacific tracks: Extend from Signal SA 6352, located 500 feet west of west portal of Tunnel 39 to interlocking signal located 1090 feet east of east portal of Tunnel 39. If Signal SA 6352 indicates "Stop", be governed by Rules 663 and 509. If interlocking signal located 1090 feet east of east portal of Tunnel 39 indicates "Stop," be governed by Rule 663.

Interlocking limits—Southern Pacific tracks: Extend from Signal SA 5255, located 800 feet east of east portal of Tunnel 1, governing westward movements, to interlocking signal located 500 feet west of west portal of Tunnel 1, governing eastward movements. Trains stopped by Signals SA 5255 or SA 5254 will be governed by Ryles 663 and 509. Trains stopped by interlocking signal located 500 feet west of west portal of Tunnel 1 will be governed by Rule 663.

(R) West Carlin Main track Detour switch, M.P. 643.4, interlocked.

Interlocking limits—Extend from Signal SA 6434, located 100 feet west of remote-controlled switch, to dwarf interlocking signal located 350 feet east on main track, governing westward movements on main track, and to dwarf interlocking signal located 350 feet east on detour, governing westward movements to main track.

If signals indicate "Stop", be governed by Rule 663 (b), and, when authorized by signal operator, crank switch if route is not properly lined.

Telephone, crank and instructions are in box on post opposite switch.

West Carlin Detour extends from remote-controlled switch on Western Pacific main track at West Carlin to connection with Southern Pacific main track at west end of Carlin Yard.

(S) East Carlin. Detour extends from east ice house lead on Southern Pacific to East Carlin on Western Pacific.

Oil-buffer spring-switch at junction is normally lined for Western Pacific main track. Westward trains or engines must STOP and examine switch points before moving over this switch.

Trains or engines moving over east detour at Carlin onto Western Pacific main track which find Signal 6458 in stop position, after stopping and before proceeding, must provide flag protection against eastward train on Western Pacific main track. If eastward train is seen or known to be approaching, train on detour must not foul Western Pacific main track until approaching train has passed or comes to a stop.

(7) Rule 667: In addition, running switches must not be made, injectors used nor boosters started passing over remote-controlled switch West Carlin and oil-buffer spring-switch East Carlin.

(V) Eastward Southern Pacific freight trains and other trains when so directed, also engines moving between Western Pacific and Southern Pacific yards, will use East and/or West Carlin detours.

(V) Crossover, Third Street, Western Pacific Elko Yard.

Switch indicator located at inside switch. In connection with Rule 512, before starting crossover movement trainmen will note switch indicator signal and if block is not occupied, switches may then be lined for crossover movement provided train which is to use crossover is ready for movement. When switch indicator signal indicates "Block Occupied" switches must not be lined for crossover movement until approaching train has passed, or stopped clear of crossover. Before crossing over, trainmen must leave lighted fusee and, when necessary, torpedoes on main track sufficient distance from crossover to insure full protection. The above in no way relieves trains approaching on main track from complying with Rule 93.

LI (W) Elko. East detour extends from south siding of Southern Pacific to Western Pacific freight yard.

V Sest Elko. Detour extends from Western Pacific freight yard to West Elko on Southern Pacific

Oil-buffer spring-switch at junction is normally lined for Southern Pacific main track. Eastward trains or engines must STOP and examine switch points before moving over this switch.

Trains or engines moving over west detour at Elko onto Southern Pacific main track which find Signal 5545 in stop position, after stopping and before proceeding, must provide flag protection against westward train on Southern Pacific main track. If westward train is seen or known to be approaching, train on detour must not foul Southern Pacific main track until approaching train has passed or come to a stop.

(X) Rule 667: In addition, running switches must not be made, injectors used nor boosters started passing over oil-buffer spring-switch West Elko.

(2) Westward Western Pacific freight trains and engines and other trains when so directed, also engines moving between Southern Pacific and Western Pacific yards, will use East and/or West Elko detours.

(AA) Western Pacific and Southern Pacific main track connections, Weso, West Carlin and Alazon, interlocked.

Alazon

West limits: Signal SA-7136 on Western Pacific track and a point on Southern Pacific track opposite W. P. Signal SA-7136.

East limits: Signal SA-7137 on Western Pacific track and Signal SA-6035 on westward Southern Pacific track and a point opposite signal SA-6035 on eastward Southern Pacific track.

East switch Alazon siding not interlocked.

At Alazon, trains or engines desiring to enter interlocking limits when no signal provided to govern the movement, including movement to main track from east switch of siding, must first receive authority from signal operator.

To determine tonnage for helper trains, 1st, 3rd and 4th Subdivisions and Branches, add together tonnage rating for class of engines furnished.

Add five tons friction for each car over 30 cars.

Tonnage rating based on maximum grade each Subdivision; between points where grades are less than maximum, greater tonnage can be handled.

SPEED RESTRICTIONS-STREAMLINE TRAINS

Maximum Speed: Diesel powered streamline trains, eighty (80) miles an hour; when handled by steam power will be governed by speed restrictions applying to steam trains.

RULE 10 (J). Yellow round slow boards with black figures indicate speed restrictions applying to Diesel-powered streamlined train "City of San Francisco."

Speed indicated by white oval slow boards applies to Diesel-powered streamlined train "City of San Francisco" unless yellow round slow board authorizing a higher speed is displayed on same post below the white oval slow board.

SPEED RESTRICTIONS—STEAM TRAINS

assenger Maximum Speed, Western Pacific engines, class C-43 Nos. 1 to 65 inclusive, MK 60 and MK 60-71, Nos. 301 to 336 inclusive, M-100 Nos. 401 to 407 inclusive, and Southern Pacific mikado engines MK-5 and MK-6, Nos. 3241 to 3277 inclusive, fifty (50) miles an hour; Southern Pacific "F" type engines 3600 and 3700 class, forty-five (45) miles an hour, and all other freight engines, forty (40) miles an hour, when handling passenger trains.

Engines running light will be governed by speed provided for freight trains.

Speed of engines backing will not exceed twenty (20) miles an hour on straight track; on curves and where track conditions are unfavorable, speed must be reduced still further to that consistent with safety.

Maximum speed, trains handling steam derricks, steam shovels, cranes, rotary plows or pile drivers, twenty-five (25) miles an hour; handling log cars twelve (12) miles an hour.

Maximum speed, except as provided for at Weso, West and East Carlin and Alazen, over all turn-outs and crossovers, ten (10) miles an hour.
