St. Louis, Mo DR. R. E. MASON	Ophthalmologist.
St. Louis, MoDR. R. A. SUTTER	Division Surgeon and Examiner.
Wellsville, MoDR. S. J. BYLAND	Surgeon.

Whenever any person other than a trespasser sustains injuries on Company property, requiring immediate medical attention, the nearest Company Surgeon should be summoned by the officer or employe of highest rank present.

In cases of emergency, when the attendance of the Company Surgeon cannot be had at once, the most available surgical aid should be called to serve until the Company Surgeon arrives, who, upon arrival, should at once take charge of the case and relieve the called surgeon from further care or attendance, as far as the Company is concerned.

In case of <u>injury to trespassers</u>, a physician, the Company Surgeon when available, should be summoned ONLY in case the injury renders the patient incapable of seeking medical attention himself. An injured trespasser should not, except in emergency, be removed from the county in which the injury occurs, but arrangements should be made to turn the patient over to the county authorities in case he cannot provide for his own care after emergency service has been rendered.

The acceptance of the ald of a surgeon called by the Company is entirely optional with injured parties. In case they desire, they can select, at their own expense, other surgical attendance.

This Company will not recognize bills of surgeons other than those on its regular staff, except for temporary service rendered prior to the arrival of the Company Surgeon, and then only for such attendance as it appears is clearly and immediately demanded. No important surgical operation should be made previous to the arrival of the Company Surgeon, except such as may be required for the immediate safety of the patient.

DR. O. H. HORRALL, Chief Surgeon, Chicago, III.

DR. R. B. KEPNER, Medical Director, Relief Department, Chicago, III.

- J. H. AYDELOTT, General Manager, Chicago.
- J. C. GRISINGER,

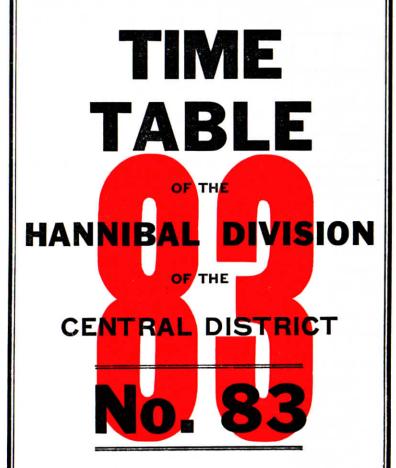

General Superintendent, Burlington, Iowa.

- H. E. HINSHAW, Superintendent, Hannibal.
- A. J. HORTON.
- Superintendent, St. Louis Terminals.
- C. W. DENTNER,
 Assistant Superintendent, Brookfield, Mo.
- F F SPERRY

General Superintendent of Transportation, Chicago.

Spring switch located East end of Brookfield yard.

Spring switch located East end of Brookfield yard.

Remote Control Switch located at west end of siding at Laclede is controlled by operator at Laclede.

Spring switch located east end of siding at Liberty.

No. 56 will stop at Kidder, Breckenridge, Mooresville, Utica, Wheeling and Meadville, to discharge passengers from Kansas

City or St. Joseph and to receive passengers for Chicago or St. Louis.

No. 56 will stop at Kearney to discharge revenue passengers from Kansas City or receive for Brookfield and East.

TRAINS EASTWARD ARE SUPERIOR TO TRAINS OF SAME CLASS WEST-WARD.

No train order signal Cameron Jct. and St. Joseph. Conductors and Enginemen must have Clearance Form A.

Automatic block system in effect Cameron Jct. to Hickory Street, St. Joseph. Spring switch located at South Park east end of outbound track from freight yards.

Speed Restrictions

HANNIBAL DIVISION.

TIME TABLE No. 83.

EFFECTIVE NOV. 15, 1942.

1. When a distant signal is displaying a restricting indication, trains must reduce speed at once and move at restricted speed until the indication of the next governing signal can be determined.

Clear indication of block signals does not modify the requirements of Rule 93. When running against the current of traffic, all trains and engines must move within yard limits at restricted speed.

2. Enginemen handling light engines must approach all hazardous road crossings where view is obstructed prepared to stop; and when advised by train dispatcher that maintenance men have no advice of the movement, also when making movement against the current of traffic, must run at restricted speed on curves and where view is obscured and use extreme care to avoid striking motor ears.

Light engines may operate at maximum speed authorized for freight trains except must not exceed 35 miles an hour.

Passenger trains handled by single-engine-truck freight engines must not exceed maximum speed authorized for freight trains unless otherwise provided in sub-division speed restrictions or by train order.

S-4, S-4-A and O-5-A engines in passenger service on west Hannibal division maximum speed.

Passenger trains handling freight equipment must not exceed maximum speed authorized for freight trains unless otherwise provided.

Gas-electric motor cars may operate on the various sub-divisions at maximum speed authorized for passenger trains, but must not exceed 50 miles an hour. On branch lines when steam is substituted for motor service speed must be reduced 10 miles an hour below authorized speed for motor trains.

Diesel-electric power units running light must not exceed 60 miles an hour.

To prevent damage to traction motors, when handling electrically operated power units, dead in train, the maximum speed must not exceed:

Gas-electric motor cars	60 MPH
Diesel-electric power units	75 MPH
Diesel-electric switch engines	40 MPH
and sub-division movimum enough and loss they will s	

Zephyr-type trains and Gas or Diesel-electric motor trains and engines must not be run over inundated tracks if the water is more than five inches above top of rail, and when operating through water, speed must not exceed 6 miles per hour.

3. Steam passenger trains operating on Zephyr schedules will reduce speed 10 miles an hour below speeds for Diesel-operated Zephyr trains as authorized on page 18 and indicated by wayside zone and curve posts. Such trains must observe speed restrictions for other than Diesel-powered Zephyr trains when passing through turnouts or crossovers, or over track or bridges covered by slow order, unless modified by train order.

When Zephyr train equipment is handled over a sub-division not equipped with wayside zone and curve posts, and for which no special speeds have been authorized for such equipment, train will operate on speed restrictions applying to other passenger trains unless modified by train order.

The following will govern the movement of M-4-A and O-5-A engines Quincy to Murray Yard via Hannibal or North River and Cameron Junction to St. Joseph.

Maximum Speed 50 miles an hour.

Must not use siding known as straight track between Main Street and Lindell Avenue Hannibal.

Must not exceed 35 miles an hour around curves between Hannibal and Palmyra, and 30 miles an hour around curves between Palmyra and North River.

Must not exceed 35 miles an hour around curves between Lathrop and Birmingham, except approaching grades, 40 miles an hour.

Must not cross Bridge 69.90 north of Carthage Branch Wye when turning engines.

Must not use Field tracks in south yard and short track Laclede.

Chillicothe, Mo. M. P. 129.6 on passing or yard track on 1° 46' ourve, use extreme caution when operating when the adjacent track is occupied by other large engines or large loads.

Must not use siding at Chillicothe when the west 600 feet of stock yard track is occupied by other large locomotives or by large loads.

Where track centers are less than 12' 3' on tangent track, M-4-A engines must not pass other M-4-A or other large engines such as (O-5, O-5-A, O-3, S-4, S-4-A, B-1, O-1-A, M-2-A, S-3), or large loads on the adjacent track.

Curve allowances: For curves up to 6° add 5' to the above minimum track centers, plus 1½' for each degree of curvature over six.

Look out for M-4-A engines in yards where track centers on tangent are between 12' 3' and 12' 9'. On curves wider clearance necessary as shown in paragraph next above.

Minimum	Track	Centers	In	Varde:

YARD	CURVATURE	TRACK CENTERS
Hannibal	5*	12' 416'
Bevier	1° 29′	11' 856'

SPECIAL INSTRUCTIONS GOVERNING THE MAXIMUM SPEEDS OF ZEPHYR TYPE MOTOR TRAINS.

Distinctive road way signals have been adopted to indicate maximum speeds of Zephyr type motor trains.

A triangle type signal with reflex letter "Z" thereon indicates zone territory where maximum speed is indicated by the numerals thereon, and will govern until the next zone signal is reached.

Where speed restrictions are required on curves within a zone, a banjo type signal with reflex letter "C" and numerals thereon will indicate maximum speed permissible for that particular curve, after which zone speed may be resumed.

Triangle and banjo type roadway signals are located approximately one mile from point of curve, or point where zone speed changes, unless otherwise specified.

Zephyr type motor trains approaching train order signal in stop position will sound four short blasts of the whistle and must not exceed sixty miles an hour passing stations at which train orders or clearance cards are to be delivered.

	Speed restrictions for Zephyr type motor trains are as follows:

TRAIN DISPATCHERS

Hannibal West Quincy Brookfield
G. M. Zinn L. C. Gibbs A. G. Rogers
R. E. Ainge A. P. Boyles W. A. Daume
R. Cluck T. G. Line C. H. Shoup
L. D. Howe W. T. O'Brien,

1. Between North Market and Old Monroe second class and extra freight trains must clear the time of No. 32 and 33, 10 minutes.

Between North Market and Burlington second class and extra freight trains must clear the time of No. 8, No. 15, No. 43 and No. 44, 10 minutes.

Between Old Monroe and Francis second class and extra freight trains must clear the time of No. 32 and 33, 10 minutes.

Where manual or controlled manual block system rules are in effect, light engines will be handled the same as passenger trains.

Under Rule 93, trains handling occupied company service cars, or carrying caretakers, must be protected as prescribed by Rule 99.

Freight trains carrying passengers or caretakers will be handled the same as passenger trains, except where otherwise stated in foot-notes, or on sub-division where Rule 907 is in effect. Conductors will advise dispatcher when passengers or caretakers on their train.

Where Rules D-251, D-252 and D-254 are in effect, freight trains stopped by train order signal at stations where sidings are located on or near schedule of first class trains will clear the main track at once unless otherwise advised by signalman. Conductors must advise promptly when clear of main track and receive permission from signalman before he can again return to main track.

Rule 374 in Book of Rules of Operating Department is modified to read as follows:

"When a train is passed by a passenger train at a non-communicating station, except in automatic block signal territory, the train passed must wait ten minutes and then proceed at restricted speed to the next available point of communication."

Train order signal must indicate stop in both directions at end of reverse movement, and Clearance Form A with copy of train order delivered to the train completing reverse movement, unless movement is controlled by signal indication.

A train authorized by train order to move against the current of traffic must approach all interlocking at restricted speed.

3. USE OF TRACK. A train taking siding must head in at first switch except as authorized by following or by train order. At Wheeling eastward trains use east track. Westward trains use west track.

The south track between Brookfield and Needles will be used only by train order authority. Manual block signal system in effect.

Trains between Bridge Junction and North Wood River will be governed by rules and timetable of the C. C. & St. L. Railroad, and those between North Wood River and West Alton by the rules of the Illinois Terminal Company.

In Centralized Traffic Control territory between Mark and Quincy, signals will govern the use of blocks and movement over controlled switches, and, unless otherwise provided, their indications supersede time table superiority and take the place of train orders. They do not dispense with the use or observance of other signals whenever and wherever they may be required.

When a train is stopped by a stop signal it must stay until authorized to proceed. Or, in case of failure of means of communication, it may proceed when proceeded by a flagman to the next point of communication or signal displaying a proceed indication.

When the signal does not clear and it is possible to communicate with the signalman, and the dispatcher is advised by the signalman that there is no opposing train in the block, instructions will be issued "Proceed complying with Rule 509-A."

The main track and controlled sidings must not be entered or fouled unless the move is authorized by signal indication, or by permission from dispatcher.

Enginemen must not permit ash pans or front end of engines to be cleaned on the tracks and switches over which movements are governed by signal indication, except at points designated by the Superintendent. Sand must not be used, ash pans cleaned, water allowed to run or blow-off cocks opened over movable parts of controlled switches or between the signals which govern the movements, in either direction, over these switches.

Santa Fe crossing at Lathrop is protected with automatic interlocking signal. Rormal indication of home signal is Stop. Distant signal indicates restricted speed. When a train is stopped by home signal and no conflicting train movement is evident a trainman shall proceed to the crossing and operate release marked CB&Q located at crossing. After time interval has clapsed signal will clear automatically. In case the operation of the release does not clear the signal, train may proceed over crossing under protection.

The West Track between McBride and Ilasco must not be used except on permission from dispatcher.

Hannibal Division trains will use tracks between Burlington and Illinois Jct. and be governed by Ottumwa and Creston Divisions Time Table.

Hannibal Division trains between Illinois Jct., Wood Tower, and Sixth Street Burlington will move at restricted speed.

Movement of trains against the current of traffic between Wood Tower and Sixth Street, Burlington, will be made on authority of the yardmaster.

- 4. Trains must be identified at meeting or waiting points.
- 5. When a train is to be advanced as prescribed by Rule 925, the engineman will, in acknowledgment of the signal, sound two long blasts of the whistle, as provided in Rule 14-b.
- 6. SPRING SWITCHES are designated by a round target bearing the letter S. Facing point movements over spring switches are protected by automatic home block signal. When signal indicates "Stop," trains may proceed on hand signal after switch has been examined and points found to fit properly. Trains trailing through switch may do so without opening or closing it. When sand or snow is blowing the switch points must be cleared before trailing move is made through switch. When trailing through switch and train is stopped before movement is complete, backward movement must not be made until switch is set and secured in proper position. When switch is opened by hand it must be closed by hand. Sand must not be used over spring switches. Drop switch will not be made over spring switches unless specifically authorized.

Sand must not be used, ash pans cleaned, water allowed to run or blow-off cocks opened over_movable parts or between route signals which govern the movements through an interlocking.

- 7. When under Rule 951, operators are instructed to handle switches for a train they must be available immediately to do so. They will maintain a position where they may be seen by the conductor and will advise him of their intention to handle switches for his train. After so advising the conductor, the operator will be responsible for the return of switches to normal position after train has passed.
- 8. Train orders addressed to motor trains handling trailer, and two ear branch line steam passenger trains handling blind end baggage cars must be delivered by Operator to Baggageman in addition to Conductor and Engineman.
- 9. When occupied outfit cars are set out of a train at a station, or on a track between stations; or when moved from one track to another at a station, the conductor must notify the Chief Dispatcher, from the first available point of communication, giving information as to the track on which the occupied outfit cars were left.

SPECIAL INSTRUCTIONS—Concluded

Under Rule 908 trains will be notified of occupied company service cars when such cars occupy sidings or station tracks used as sidings.

10. Under Rule 103, when cars are pushed by an engine over public crossings at grade, not protected by a watchman or gates, a member of the crew must protect the crossing, unless the move is made under Rule 1012.

Should train or enginemen observe that highway crossing signals or gates are not operating properly, the fact should be reported promptly by wire to the Superintendent and Chief Dispatcher

- 11. To avoid stalling and backing up for a run at stations with short grade approaches where it is necessary to take siding, trains should be stopped sufficient distance from the switch to get necessary start and brakeman should go forward and set the switch properly.
- Conductors must report by wire, storms or conditions that may render track unsafe and will tie up their trains when in their judgment it is unsafe to proceed.
- 13. When signals protecting switches operated by remote control are in stop position, train or engine men will promptly communicate with operator, and when so instructed may proceed by stop signal, first examining switches and derails in route designated, assuring themselves that they are in proper position.
- 14. Derricks, steam shovels, ditchers, draglines, rail loaders, and other similar equipment loaded on flat or other open-top cars with booms connected and handled in freight or mixed trains must have booms trailing and securely fastened. Cars loaded with such equipment, when picked up at intermediate stations or Junctions and not properly turned, must be turned at first point where facilities are available to effect trailing position of booms.

When this equipment is moving in freight or mixed trains upon its own wheels, the boom must be disconnected and loaded so as to be entirely free of swinging features. Steam wrecking derricks, and bridge derricks, having specially designed idler cars, are excepted from requirements of this rule.

15. Rule 914 in Book of Rules of the Operating Department is modified to read one mile instead of 3,000 feet. Under Rule 914, on trains equipped with communicating signal System, the proceed signal will be given by one short sound of the communicating signal.

- 16. Grade signals changed from the aspects and instructions shown on pages 88 and 89 of Rules of Operating Department by replacing the yellow roundels in semaphores with red roundels, the blades red and white instead of yellow and black, and in color light signals one yellow roundel changed to red. Trains may pass grade signal displaying restrictive indication at 10 miles an hour instead of five, and be governed/by Rule 509-A or 509-B.
- 17. The use of cupola lights will be discontinued and that part of Rule D-19 of Rules of the Operating Department reading, "A red light to the rear and a green light to the front must be displayed in cupola of cabooses while on main track" is abolished.
- 18. Rule 919 is modified to permit the use of a white electric lantern, the red lantern must be oil burning.
- 19. High or wide loads moving in trains with restrictions on account of limited over-head or side clearance must be handled next to engine when practicable.
- 20. The night signals to be used under Rule 936 are modified as follows: Hot Journals— Stop signal followed by lamp swung in small vertical circle. Brakes Sticking— Stop signal followed by lamp in sliding movement out from body.

21. SPEED OF TRAINS.
