NOTICE

The data shown in this circular includes all changes reported to Accounting Department to October 1, 1967.

Numbers have been assigned to all freight stations on systemwide basis to provide a meaningful and systematized numbering scheme, as explained hereinafter.

(NOTE: No change is to be made in freight station accounting numbers employed for agency waybilling and revenue account reporting purposes until some presently indeterminate time, and pending issuance of specific instructions for such changeover, agents should continue to observe station numbers shown in Accounting Department Circular 296-D "Freight accounting numbers to designate stations on waybills and reports, effective June 1, 1962" for waybill and revenue reporting.)

The Lines of Southern Pacific Company are divided into the following operating divisions:

West of El Paso (Pacific Lines)

- | | |
|----------------|----------------|
| 1. Oregon | 4. Western |
| 2. Sacramento | 5. Los Angeles |
| 3. San Joaquin | 6. Tucson |

East of El Paso (Texas and Louisiana Lines)

- | | |
|----------------|---------------|
| 7. San Antonio | 9. Dallas |
| 8. Houston | 10. Lafayette |

The different divisions follow through the body of the book in the order shown.

Direction of the various main line trackage follows a West to East pattern starting at Portland, Oregon, and progressing in a general southerly and southeasterly direction to New Orleans, La. (and to East St. Louis, Ill., on St. Louis Southwestern Railway). Main lines on each division are segregated to reflect operations between principal terminals or junctions. Branch lines of each division are shown in alphabetical order under their individual names and designation immediately following the listing of main lines.

Stations which are junctions with main and branch lines, or which are interchange points with connecting railroads, are shown in bold type.

Data contained herein is for the information of company employes only. It is not for use of the public, and it should not be used in connection with the computation of transportation charges.

Employes are urged to notify Mr. H. A. Nelson, Vice President and General Auditor, SPCo., of any error, however trivial, that may be found.

CORRECTION NUMBER SHEET FOR CIRCULAR 4

Complete pages will be revised from time to time as a means of constantly keeping Circular 4 on a current basis. When any page is revised, or page added, a correction number (issued in numerical order) with date new or revised page is issued, will appear in the lower corner of the page revised, and, therefore, if recipients check off "correction number" as reissued pages are received, they will be able to make sure that ALL corrected pages have been received. Recipients finding that any of the pages issued under a particular "correction number" have not been received, should request the missing pages from Vice President and General Auditor, 65 Market Street, San Francisco, California 94105. Each revised page will show sequence of the page revision, or whether page is a new one.

40	80	120	160	200	240

EXPLANATION OF CHARACTERS AND SYMBOLS

Mile Post Location

For Pacific Lines stations the mile post locations shown represent distances from San Francisco. For stations on Texas Lines the mile post locations are from Houston, and on Louisiana Lines from New Orleans. Mile post locations for Texas and Louisiana branch lines generally start from point of junction with main line.

On St. Louis Southwestern Railway the mile post locations are mainly based on distances from Bird's Point, with certain stations reflecting distances from Gray's Point and St. Louis as specifically indicated.

Kind of Agency

F—Freight; T—Ticket; X—Joint SP-REA Express Agency.

Class of Freight Station (i.e., amount of freight that may be received or shipped):

A—Agency station. Carloads, *trailerloads or **less-than-carloads.

B—No agent. Carloads, *trailerloads or **less-than-carloads.

C—No agent. Carloads or *trailerloads only.

D—No agent. *Trailerloads or **less-than-carloads only.

E—Freight will not be handled. For operating purposes only.

*Trailer-on-flat-car service will be handled to extent provided in applicable rate tariffs.

**Less-than-carload freight will be handled on a limited basis only and such basis will vary depending on class of station, state in which station is located, articles involved, weight thereof and whether movement is interstate or intrastate in character. Pick-up or delivery service is also limited in same manner. Official List of Open and Prepay Stations No. 82 (issued by A. P. Leland, Agent, St. Louis, Mo.), supplements thereto or reissues thereof, and applicable rate tariffs, should be consulted to determine extent to which less-than-carload freight will be handled or pick-up or delivery service performed at stations classified A, B, or D.

(Refer also to Leland's Official List of Open and Prepay Stations for exceptions to prepay requirements covering shipments destined non-agency stations.)

Livestock Facilities

W—Water. F—Feed. Figures denote capacity of corral in carloads.

Ramps

Stations with ramps for conventional TOFC Service and/or Multi-Level cars are indicated by symbols \textcircled{P} or \textcircled{M} , respectively, following station name.

CIRCULAR 4

STATION NUMBERING SYSTEM

To provide a more objective and functional concept in station numbering, and coincidentally permit the implementation of a unified numbering arrangement common to all using departments, all freight stations of Southern Pacific Company and its rail subsidiaries (including the Cotton Belt) have been assigned freight station numbers.

Basically, the numbering plan is a five-digit numeric code system, codified on basis of the geographic location of stations. The numbers begin at Portland (00001) and progress sequentially in a general southerly and southeasterly direction through to East St. Louis (84200) on the Cotton Belt, and to New Orleans (92900) on SP Lines.

Code structure first divides the station numbers into ten main geographic regions or zones, identified by the first digit of the 5-digit station number, as follows:

Between

- 0—{Portland, Ore. and Dunsmuir, Calif.
Klamath Falls, Ore. and Weso (and Fernley), Nev.
- 1—Roseville, Calif. and Ogden, Utah
- 2—{Dunsmuir and Saugus, Calif.; Tracy and Fresno, Calif. (via
West Side)
Meadowsweet and Eureka, Calif. (NWP RR)
- 3—San Francisco and Chatsworth, Calif. (Coast Route)
- 4—{Chatsworth (and Saugus), Calif. and Yuma (East Yard), Ariz.
El Centro and San Diego, Calif. (SD&AE)
- 5—Yuma (East Yard), Ariz. and El Paso, Tex. (and Tucumcari,
N.M.)
- 6—El Paso and Flatonia (and Brownsville), Tex.
- 7—Flatonia and Houston, Tex.—radiating from Houston northerly
to Denison, Tex. and Shreveport, La.; easterly to Echo, Tex.;
and southerly to Galveston, Tex. and other Gulf ports. (SP and
SLSW)
- 8—Corsicana, Tex. and East St. Louis, Ill. (SLSW)
- 9—Echo, Tex. and New Orleans, La.

STATION NUMBERING SYSTEM—Concluded

Each main area further divides into ten groups, represented by the second digit. The first digit when combined with the second denotes the district or section in which the station is located. The third, fourth, and fifth digits collectively identify the station within the district. Thus in station number 27025, first digit (2) signifies station is in the Central Valley area; the combination of the first two digits (27) indicates that the station is specifically located in the San Joaquin Valley district between Chowchilla and Tipton; and the last three digits particularize the station within such district (in this case Madera).

Each division has been assigned a block of numbers, which begin at a division junction and run sequentially on main line through to first branch junction, at which point numbers continue progressively to end of the branch (including a branch off a branch). Numbers then resume on main line and proceed in sequence to next branch take-off point, where aforementioned numbering process is repeated. Each branch has its own distinctive set of numbers, assigned in close proximity to and for association with station number of the applicable line junction.

A collateral, purposeful function of the station code numbers is to afford a uniform systemwide identification arrangement for blocking and tagging purposes. A cross-coding feature has been built into the basic station number code structure to permit using the first two or three digits, as required, in the development and delineation of block numbers in classification yards and terminals. Similarly, last two digits can be utilized at SP System destination station for interchange or spotting of cars in local blocking or switching. In furtherance of this objective, major terminals have been allocated 100 numbers each to cover block codes for connecting lines and with an allowance for expansion in event of reciprocal blocking.

A numerical location key for associating the ten main geographical areas, and the further subdivision within such areas by districts, is given in following pages, together with a listing of numerical station number series assigned the various main lines and the individual branch lines.

A map indicating the ten main geographical areas has been inserted for ready reference.

STATION NUMERICAL LOCATION KEY

ALPHABETIC INDEX OF STATIONS

Separate station indices have been provided for each of the various rail companies, as follows:

	Page Reference
1. Southern Pacific Lines.....	167 to 193, incl.
2. SP Subsidiaries (West of El Paso):	
Holton Inter-Urban Railway.....	194
Northwestern Pacific Railroad.....	194-195
Oregon, California & Eastern Railway.....	195
Petaluma and Santa Rosa Railroad.....	195
Portland Traction Company.....	196
San Diego & Arizona Eastern Railway.....	196
Sunset Railway.....	197
Tijuana & Tecate Railway.....	197
Visalia Electric Railroad.....	197
3. St. Louis Southwestern Railway.....	198 to end

NOTE: Stations that are main or branch line junctions are shown in two or more places in the Circular, but are listed only once in this index. The index listing in such cases has been governed according to the initial main line showing of the station (or to the branch in closest proximity to main line in the case of junction stations on a branch off a branch). Such instances are suitably cross-referenced in body of Circular to enable ready identification of the several lines or branches on which a particular station is located.
