SPINS  
SOUTHERN PACIFIC INDUSTRIAL  
NUMBERING SYSTEM

Spins is a standard method of identifying: Industries, Switching zones, Tracks, and Consignee loading and unloading spots. By giving zones, tracks and spots certain designated numbers, we are able to print switch list with the exact location to which a customer's car is to be spotted.

A spins number contains up to six digits. The first two digits indicate: Zone to which the car is destined.

The next two digits indicate: Track number within the zone

The last two digits are: Actual spot or coded spot.

EXAMPLE: Spins 805501 means that the car is for Zone 80, Track 55, Spot 01, on that track.

Zone and track numbers appear on the switch targets. Spot signs are placed where customers normally load or unload their cars.

Spot signs are 6"X6". Green metal signs with 4" white reflectorized numbers. These signs are placed at center of car spot for spotting if possible from either side of car.

## SPECIAL SPOT NUMBER CODE

The last two digits of a SPINS number may convey a special meaning and are listed below:

- 88 Tank car open spotting
- 89 Industry does own switching
- 90 Team track spotting
- 91 Storage track
- 92 Order in basis only
- 93 Crane spotting
- 94 Hopper spotting
- 95 Dock spotting
- 96 Piggyback
- 97 Auto ramp or End ramp
- 98 Interchange to other railroads
- 99 Open area where not possible to put up spot signs
- 00 Cars on lead or Off spot

There are two basic documents used by Engine Foreman and/or Conductors to record car movement activities at those locations where Industrial Switching is performed; CONDUCTOR'S WORK REPORT CS 1306-4 and INDUSTRY WORK REPORT SC 1307.

### CONDUCTOR'S WORK REPORT CS 1306-4

This report is used to record cars picked-up, setout, spotted, and pulled enroute. It is required that conductors complete this report showing times, work performed codes, station from, station to, and SPINS number according to how the cars were handled. The original of this report, once completed, must be turned in at the off-duty location where they will be used to make the TOPS reportings and as supporting document for demurrage. The work performed codes must be used to define the handling of cars as follows:

#### S- SPOT

Car is spotted in place for loading or unloading. Show the letter S in the code column, Time and Date in the next column.

#### B- BAD ORDER

A car that did not spot or pull account of Bad Order conditions. Show the letter B in the code column, Time and Date in the next column. In the remarks column, write in the Bad Order Reason, if known and SPINS number where the car was left.

**H- HOLD/STORAGE**

Covers cars to be held, stored surplus or stored for prospective loading. Show the letter H in the code column, Time and Date in the next column. In the remarks column, write the SPINS number of the track cars were left on.

**O- OFF SPOT**

If unable to spot car due to no fault of customer, show the letter O in the code column, Time and Date in the next column. In the remarks column, write the SPINS number of the track car was left on and reason unable to spot the car.

**P- PULLED**

If car is pulled out of an industry, show the letter P in the code column, Time and date in the next column.

**R- RESPOT**

Moving a car within an industry because it was not spotted properly the first time, or a car that was a load inbound and is being respotted for loading outbound, show the letter R in the code column, Time and Date in the next column. In the remarks column, write the SPINS number of track car was moved from the SPINS number of track car was left on.

**C- CONSTRUCTIVELY/PLACED**

If delivery of a car cannot be made because customer's track will not accommodate car, or because of any other condition attributable to the customer, show the letter C in the code column, Time and Date in the next column. In the remarks column, write the SPINS number of track car was left on.

**INDUSTRY WORK REPORT CS 1307**

The original of this report must be marked according to disposition of each car showing time, report codes, and SPINS numbers. The completed report must be returned to the off-duty location. The codes on the form must be used to define the handling of cars in the industrial area as follows:

**S- SPOT**

Car is spotted in place for loading or unloading. Show the letter S in the code column, Time and Date in the next two columns.

**P- PULLED**

If the car is pulled out of the industry, show the letter P in the code column, Time and Date in the next two columns.

**B- BAD ORDER**

A car that did not spot or pull account of bad order conditions, show the letter B in the code column, Time and Date and Bad Order reason, if known, in the next three columns.

**R- RESPOT**

Moving a car within an industry because it was not spotted properly the first time, or a car that was a load inbound is being respotted for loading outbound. Show the letter R in the code column, Time and Date in the next two columns. In the remarks column write the SPINS number where car was left.

**O- OFF-SPOT**

If unable to spot car due to no fault of customer, show the letter O in the code column, Time and Date in the next two columns. In the remarks column write the SPINS number of the track car was left on and the reason unable to spot the car.

I- INTRAPLANT SWITCH

If the car was moved from one spot in an industry to another spot, either on the same track or different track within the same industry, on request of the customer, show the letter I in the code column, Time and Date in the next two columns. Write in the remarks column the SPINS number where you spotted the car.

Z- SET OUT IN ZONE

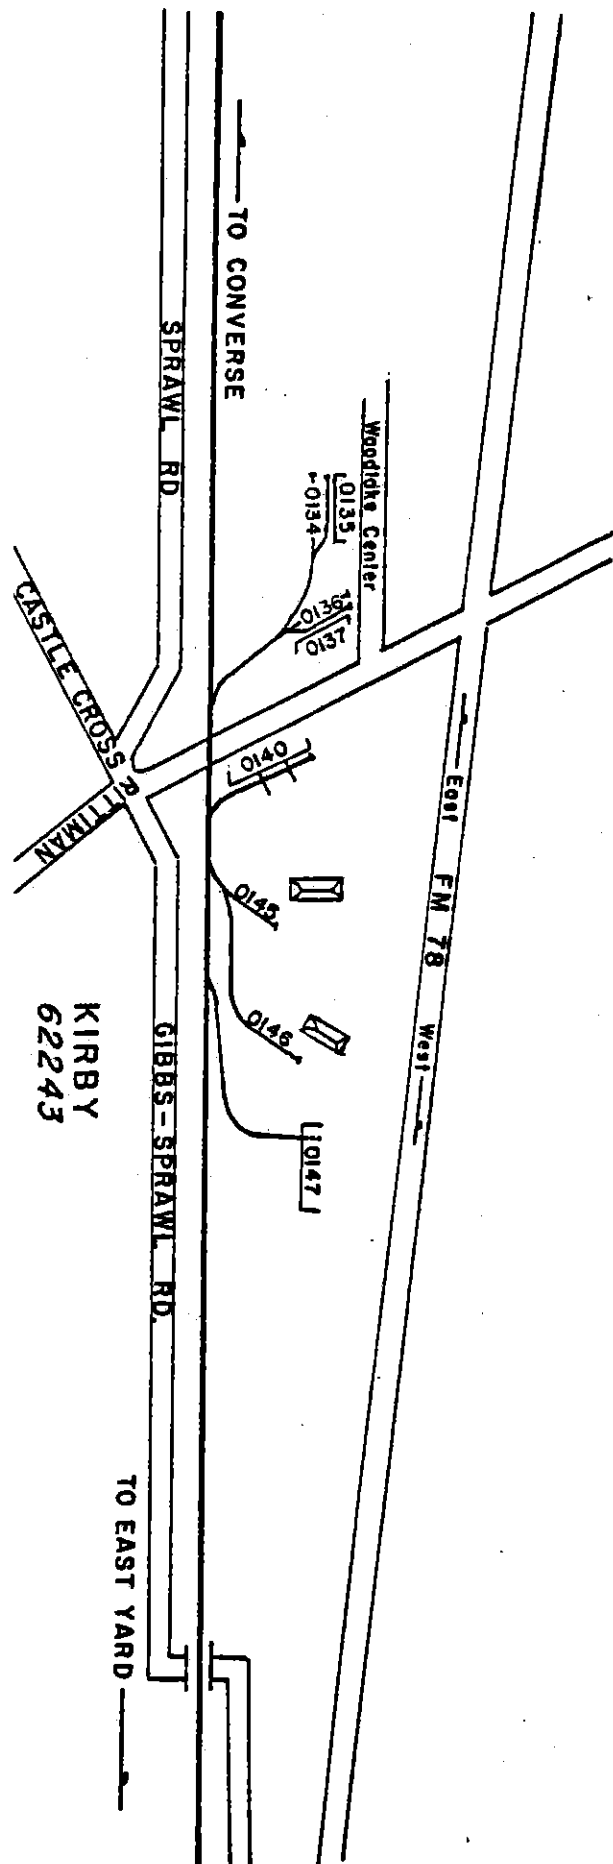

If cars are set to a sluff track in an industrial area, show the letter Z in the code column, Time and Date in the next two columns. Write in the remarks column, the SPINS number of the track where cars were left.
