Signal System Two in effect between Barstow and Mojave, and between Kern Jct. interlocking and Bakersfield.

Rule 261 (TCS) in effect on main track and sidings between West Tower Barstow and M.P. 817.5 at Mojave.

In TCS sidings, speed limit 40 MPH.

Rule 85: Between Barstow and Mojave, exchange of train orders, signals and numbers, is not required.

At Barstow between East and West Towers there is no superiority of trains. Trains and engines within these limits must proceed at restricted speed; between these points main track may be used not protecting against regular and extra trains and engines.

At Bakersfield between Signal 8871 at M.P. 887.5 (H Street) and end of two tracks 800 feet west of M.P. 888 there is no superiority of trains. Trains and engines within these limits must proceed at restricted speed; between these points main track may be used not protecting against regular and extra trains and engines.

Southern Pacific time table and rules govern movement of trains Kern Junction interlocking to M.P. 817.5 at east end of Mojave yard.

Rule 251 in effect between Kern Jct. and M.P. 887.5 at Bakersfield.

Trains must get clearance card before leaving Barstow and Bakersfield, except at Barstow trains may proceed on clear train order signal in lieu of clearance card.

Signal System Two in effect between Calwa and Richmond.

Rule 261 (TCS) in effect on main tracks and sidings, except on siding Hammond, between Calwa and signal located 100 feet west of M.P. 1123.

In TCS sidings, speed limit 40 MPH.

Rule 85: Between Calwa and Stockton, exchange of train orders, signals and numbers, is not required.

At Sando, westward train on main track meeting eastward train must not pass preliminary board until Signal 11503 assumes stop position; westward train on siding must occupy spotting section two minutes with switch reversed, after which Signal 11505 will clear if main track unoccupied.

At Glen Frazer, westward train finding Signal 11731 or Signal 11733 in stop position may obtain proceed signal if route is clear by inserting switch key in governing signal box and turning to right. Westward train on auxiliary siding will find Signal 11735 in stop position and may obtain proceed signal if route is clear by lining switch for main track.

At Christie, eastward train on main track to meet westward train, must not pass preliminary board in advance of Signal 11752 until westward train has entered siding. Eastward train on siding must remain west of spotting section until ready to depart. Spotting section designated by sign near dwarf Signal 11754. Eastward train, when ready to proceed, must occupy spotting section between sign and dwarf signal; signal will

clear in 45 seconds if main track is clear between west end of Glen Frazer and Signal 11782 at east end of Collier. If train is occupying section of main track between east end of Christie and Signal 11782 at east end of Collier, the signal will not clear before two and one-half minutes.

Train failing to secure proceed indication on Signals 11731, 11733, 11735, 11752 or 11754 through procedure indicated above will be preceded through tunnel by flagman and train will not enter tunnel until flagman reaches opposite end of tunnel, calls on phone and notifies dispatcher and conductor (latter will listen in on phone at portal of tunnel from which flagman started) that route is clear. Flagman will specify "This is Flagman (giving name) of Train No. (giving number of train) and the route is clear." Conductor will acknowledge this information and train will proceed through tunnel at restricted speed. Booth telephones located at each portal of tunnel.

Night signals will be displayed through all tunnels between Maltby and Christie.

At Richmond between MP 1188.6 and junction Oakland district there is no superiority of trains. Trains and engines within these limits must proceed at restricted speed.

Trains must get clearance card before leaving Calwa and Richmond.

Extra trains must get clearance card before leaving Riverbank.

AVOID DAMAGE — SWITCH CUSTOMERS' CARS CAREFULLY

OVERSPEED Couplings are DAMAGING — Here's what happens:

Safe — Danger —

| | | |
|-------------------|--------------------------|-------------------------------|
| 4 miles per hour | <input type="checkbox"/> | SAFE COUPLING SPEED |
| 5 miles per hour | <input type="checkbox"/> | Damage Begins |
| 6 miles per hour | <input type="checkbox"/> | 2¼ times as damaging as 4 MPH |
| 7 miles per hour | <input type="checkbox"/> | 3 times as damaging as 4 MPH |
| 8 miles per hour | <input type="checkbox"/> | 4 times as damaging as 4 MPH |
| 9 miles per hour | <input type="checkbox"/> | 5 times as damaging as 4 MPH |
| 10 miles per hour | <input type="checkbox"/> | 6 times as damaging as 4 MPH |

Damage to freight or car can be avoided by always keeping coupling speed within the safe range—NOT OVER 4 MILES PER HOUR—A BRISK WALK.

Handle freight carefully and keep our customers.

IT'S EVERYBODY'S JOB ON THE SANTA FE!
