Cleveland District:

Freight Yard-Extends to MP 208

SP and SSW trains and engines operate over ICG main tracks between Mile 169.3 and Spring Street Jct.

Trains and engines approaching ICG main track from SSW at Spring Street Jct. must stop and will not foul ICG main track until a member of the crew, after observing that the way is clear, gives proceed signal from ICG main track.

Employes using MP track, Natchez, must provide themselves with copy of MP current special instructions including general orders and any revisions thereof.

93. (Continued)

Cars are not to be shoved ahead of the engine making transfer movement in either direction, between MP interchange and classification yard near the International Paper Company, Natchez, unless due to bad order condition, they cannot be handled behind engine, it is then permissible to handle such cars ahead of the engine.

S-97. Yazoo District extras authorized between Gwin and Cynthia will run as extras between Cynthia and North Jackson.

98. Railroad Crossings Not Interlocked:

Train and engine movements through switch at junction of Meridian District and Gulfport District and movements on Canton District and Natchez District, south of Passenger Station, Jackson, will be made by the authority of switchtender either by radio communications or hand signals.

Tallulah: Route is normally lined against train and engine movements on MP. When a train or engine is stopped by a stop signal at crossing and there is no conflicting MP train or engine movement evident and derails on MP track are in derailing position, movement over crossing will be made on hand signal given by trainman at crossing. Such movement must be made at RESTRICTED SPEED.

Scotland L&A Crossing Mile 360.8 (Vicksburg District) When train or engine is stopped by a stop signal at crossing and there is no conflicting L&A train or engine movement evident, movement over crossing will be made on hand signal given by trainman at crossing.

Hattiesburg: Southern Crossing, Gulfport District: Stop indication displayed for ICG movements. ICG trainmen will operate key release according to instruction on signal post.

Gulfport: L&N Crossing. Stop indication displayed for ICG movements. ICG trainmen will operate switch machine according to instructions posted.

Trains and engines must stop at junctions, drawbridges and railroad crossings as follows:

Yazoo Junction Sunflower District trains
Spring Street Jct. SSW and SP trains and engines
Shreveport SSW, L&A, and KCS crossings
Harriston Vicksburg and Natchez Districts crossing
Columbia Bogalusa and Fernwood District crossings
Wanilla Bogalusa and Central District crossing

Bridge VD 72-O Ouachita River, Monroe: Movement will be governed by fixed signals. When a train or engine is stopped by a STOP indication at bridge, it may proceed after enginemen and trainmen have satisfied themselves by examination that draw is in proper position and the track is clear.

98(a). Railroad Crossings Protected by Gates:

Jackson

Switching lead east of passenger station—Normal position against switching lead. All train and engine movements on Meridian District over the crossing will be governed by color light home signals located 150 feet from the crossing.

Rayville	MP—Normal position against MP
Gibsland	L&NW—Normal position against L&NW
Newton	No normal position
Silver Creek	Normal position against Columbia District
Bell Yard	Normal position against Beaumont District
Hattiesburg	Old MC Main Track and Southern Bailway
	gravel lead, normal position against ICG

101. Speed restrictions: Speeds shown are maximum authorized between points named but do not modify any rule or special instructions which may require lower speed.

TERRITORY OR LOCATION

Speed on ANY track other than MAIN track or siding must not exceed 10 MPH.

All trains reduce speed to 25 MPH, between hours of 6:01 AM and 6:01 PM over private road crossing 1280 feet east of MP 83, Meridian District, until engine or lead car passes over crossing.

101(b). On the Meridian, Shreveport, Vicksburg, Gulfport, Columbia, Laurel, Central, Natchez, Winnfield and Beaumont Districts, Maintenance of Way Department yellow rectangular sign will be located one mile in advance of point where reduction in speed is required.

Yellow rectangular signs encountered on the Columbia, Central, Winnfield, Beaumont and Laurel Districts will indicate a speed of 5 MPH unless otherwise provided.

103(d). All freight trains and engines will not pass over ANY crossing in Jackson between the hours of 7:40 AM and 8:20 AM and 4:40 PM and 5:20 PM. If crossing cannot be cleared prior to time specified, movement over crossings must not be started until expiration of time specified.

Trains and engines must be preceded by flagman at a proper distance as prescribed by law, when passing over following street, highway, and railroad crossings.

Jackson	Gallatin Street Clifton Street Terry Road	Poindexter Street Dalton Street Valley Street
Natchez	Brenham Avenue Wall Street Devereaux Street Canal Street Pine Street Broadway Street Rankin Street	Briel Ave. (MP) Union Street Liberty Road Commerce Street Washington Street Pearl Street
Hattiesburg	Main Street Mob'le Street Pine Street Old Highway 24 Bouie Street	East Hardy Street Newman St. (Northward trains and engines only) Southern Yard Track Crossings

Shreveport (only if delayed within crossing signal circuit McNeil Street

Train or engine movements against the current of traffic must not proceed over Robb street, Summit, until it is protected by a member of the crew and a speed of 10 MPH must not be exceeded until crossing has been occupied by engine or lead car.

111(e). Chicago Train Detector Center has radio communication ability with trains passing Bentonia, Hazlehurst, Clarksburg, Bolton, Bee Bayou and Simsboro.

In order to have a uniform procedure and understanding for handling hot boxes, loose wheels, or dragging equipment by the communicators at the Chicago Train Detector Center with the engineers of the concerned trains, the following instructions will govern.

When a hot box, dragging equipment or loose wheel is detected, Chicago Hot Box Center will contact the appropriate train in the following manner: Monitor Station: This is the Chicago Hot Box Center calling the train passing (City) (State) Detector. Stop your train; you have a (A. hot box or B. dragging equipment or a loose wheel). Train Engineer Response: This is the engineer on the train (Identity of train) passing (city) (state) Detector. I am stopping my train.

If the response is not received within ten (10) seconds, employe at monitor station will repeat and wait another ten (10) seconds, then repeat a third time. If still no response the employe will immediately notify the appropriate train dispatcher to have this train stopped.

After engineer responds, employe at monitor station will reply: I will give you location of the car after you have your train stopped. During the time the engineer is stopping his train, the employe will notify the appropriate train dispatcher that a train is being stopped and that he should monitor the operation from this point on.

Monitor Station: This is (Chicago Hot Box Center) calling engineer on train (identity of train). Monitor station: Engineer on train————, you have a (A. hot box or B. dragging equipment or a loose wheel), located——————Cars from your (Lead unit or caboose) on the (North, South, East or West) rail. It is the (lead or trailing) truck, (lead or trailing) wheel.

When there is more than one diesel unit or caboose in the consist, they will be counted as a car. All rails will be identified in relation to the timetable direction, (ie., timetable direction east or west, identify rails as north or south).

An on-the-ground thermal inspection must be made by a member of the crew of the car reported to be defective and if defect is not found, the two (2) cars in each direction from the car reported must be checked by feeling each box lid for reported hot box defect, and examining wheels and axles or brake rigging for other reported defects.

At this point in the operations, the control of this train will be turned over to the train dispatcher for appropriate action and the monitor station will withdraw from further operation.

A member of the crew must report to the train dispatcher upon completion of inspection of the train, the car initial, number, wheel, nature of defect, if any, and disposition of the car, so that record of stops may be maintained. If defect is not found, report must be made to connecting crew so that car may be kept under observation, or report made to yard forces at final terminal.

If unable to talk direct to the train dispatcher via radio, a message containing the above information must be addressed to the train dispatcher and Chicago Hot Box Center and dropped off at the next open train order office where the operator on duty will report same to the train dispatcher and Chicago Hot Box Center recording time and party notified and file same.

Train crew will be notified when hot box detectors are out of service and will make careful running inspection of their trains.

When two consecutive detectors are out of service, crews must stop their train in the vicinity of the last inoperative detector and make an on-the-ground visual inspection of both sides of train.

M-151. Two Main Tracks.

McComb to North Jackson.

Spring Street Jct. to Mile 169.3 (SP connection).

Mile 217.26 on Yazoo District to North Jackson.

Mile 149.79 on Yazoo District to Mile 147.82 North of Tchula.

Between North Jackson and Jackson:
No. Location Normal Use
1 West Freight trains

1 West Freight trains
2 East Passenger trains
Between North Jackson and Jackson the use of

Between North Jackson and Jackson the use of the main tracks by freight trains will be on the authority of the yardmaster at North Jackson. 215. Meridian District trains leaving West Meridian will get their clearance at Meridian.

Natchez District trains leaving Jackson will get their clearance at North Jackson.

Gulfport District trains leaving Gulf Yard will get their clearance at North Jackson.

Eastward Meridian District trains moving over Low Line Jackson must secure a clearance before leaving East Jackson.

Sunflower District trains leaving Yazoo Jct. will get their clearance at Yazoo City. All Sunflower District trains must obtain authority from Operator Yazoo City before using Yazoo District main track at Yazoo Jct.

Canton District trains leaving McComb will get their clearance at South Yard. Conductors and Engineers on northward trains changing crews at McComb will deliver clearance, and orders, if any, received at South Yard to connecting outbound Conductor and Engineer.

Vicksburg District trains leaving MP Junction will get their clearance at North Baton Rouge.

Cleveland District trains leaving National Cemetery will get their clearance at Freight Yard.

Trains must secure a clearance before leaving East Monroe.

Central District trains leaving Hattiesburg will get their clearance at Bell Yard.

Trains must secure clearance before leaving Bell Yard.

Trains must secure a clearance before leaving Ferguson.

- 221(e). Signs equipped to display red or green aspect are used at Morton and Port Gibson in lieu of train order signal. Sign displayed red to approaching train indicates there are train orders to be delivered. When there are no train orders sign will display green.
- 251. Between Jackson and McComb, trains will run with reference to other trains in the same direction by block signals whose indication will supersede the superiority of trains. Extras will keep advised of and avoid delay to first class trains.
- 292. When southward signal on south wye track Jackson conveys Stop indication and no southward moves on southward main track are apparent after stopping at signal, movement may be made in accordance with Rule 93.
- 505. Automatic block system territory extends from Canton to McComb.
 - 525. Centralized traffic control in service between:

South end of siding at Cynthia and the north end of two main tracks at North Jackson, controlled by the operator at North Jackson.

560. Spring Switches:

ood oping byrenes.	
Location Shreveport:	Normal Position
Spring Street Jct.	For main track
East end two main tracks	For westward main track
Mile 169.3	For SP main track
West end two main tracks	For eastward track
Renshaw Siding-North switch	For main track
Anding—North switch	For siding
Cynthia Siding—North switch	For siding
Cynthia Siding—South switch	
North Jackson—North end two main tracks, Yazoo District	
North Jackson—South end of yard	For yard
Jackson—South wye switch southward	

Following spring switches are protected by reflector sign located one mile in advance of facing point switch and trains and engines must approach prepared to stop unless signal at switch indicates proceed:

Location	Normal Position
Gwin—South switch	For Northward main track
Anding—South switch	For main track
Renshaw-South switch	For main track
605. Manual Interlockings:	
East JacksonICG	East MonroeMP
Gulf YardICG	··

Remote controlled interlocking at Bogalusa District and Gulfport District crossing, Gulf Yard, Bogalusa District and Meridian District crossing, East Jackson, is controlled by operator at East Jackson.

610. Automatic Interlockings:

RoxieICG	Bossier CitySSW
S.bleyL&A	Shreveport (Mile 169.7) T&P
RustonCRI&P	BrookhavenICG

Shreveport: Trains and engines must approach home signal of automatic interlocking T&P crossing prepared to stop.

1201. Dead diesel units may be handled anywhere in the first twenty cars of a train, and when practical, should be handled next to the units handling the train. Crew should observe dead units closely for indication of sticking brakes and sliding wheels.

1202. Between Canton and McComb, for passenger trains only, the definition of "Restricted Speed" is amended to read as follows:

"Proceed prepared to stop short of train, obstruction, or switch not properly lined and look out for broken rail, but not exceeding 15 MPH."

1203. When necessary to operate multiple diesel units in reverse direction for any great distance over territory where road crossings will be encountered, operate engine from the leading cab. Where this is impractical a member of the crew must ride leading cab to operate horn and bell and be in position to operate emergency brake valve if necessary to avoid an accident.

1204. The following restrictions are placed showing maximum gross weight for 4-axle cars permitted by districts:

Gulfport	Jackson to Gulfport	263,000
Columbia	Mendenhall to Columbia	240,000
Laurel	Taylorsville to Laurel Saratoga to Taylorsville	240.000
Central	Hattiesburg to Natchez	263,000
Meridian	Vicksburg to Meridian Exception: Cars longer than 51'	263 000
Natchez	Jackson to Utica	240,000
	Harriston to Natchez	263,000
Vicksburg	Freight Yard to Baton Rouge	263,000
	Exception: Cars longer than 51'	315,000
Shreveport	Freight Yard to Shreveport	263 000
**** e. 1 7	Exception: Cars longer than 51'	315,000
Winnfield	West Monroe to Winnfield	240,000
Beaumont	Bell Yard to Beaumont	220,000
(#) *** ****		

(a) IC 63300-699 Series, 57' 4½" pulpwood cars, may be permitted to move Utica to Harriston, with a gross weight of 240,000 pounds maximum. A single car shorter than 49 feet, with 240,000 pounds maximum may be moved between Utica and Harriston provided the single car is separated in the train from the engine, or any loaded car, by an empty car weighing not more than 60,000 pounds.

1204. (Continued)

Engines are prohibited over:

Port Gibson Oil Mill—Track Scales

Canton—C&C RR—Bridges Creosote Track

1205. Every effort must be made to keep coupling speed of diesel engines to 3 MPH or less; however, when a heavy impact is made by a diesel engine, it must immediately be shut down and inspected by a member of the Mechanical Department before it is restarted. Such cases must be reported by the quickest available means of communication to the train dispatcher.

1206. Siding Capacities are based upon an average length of 55 feet per car, four (4) diesel units and caboose.

For each car in your train having a length of 85 feet or more, add one (1) additional car. For example, a 175 car train of which 25 are long cars will have an equivalent car length of 200 cars.

1207. Cabooses must not be switched with, kicked into track against other cars, or cars kicked into track against cabooses.

1208. Passenger equipment handled in freight trains must be placed next ahead of caboose, unless otherwise instructed.

1209. When making a backward movement with more than three (3) diesel units in multiple there is a danger of jack-knife action of the units which may result in rail turning over under engine. Before making a backward movement, shoving cars or taking slack (movement of light engine excluded), the leading units must be isolated and only the rear three (3) units allowed to work power. Engineers must see that these instructions are strictly observed.

1210. When leaving Locomotive unattended, the following procedure will apply.

- 1. (a) Place automatic brake valve handle in "running" position and brake pipe cut out cock in lead (open) position.
 - (b) If brake equipment is 26-L, see that automatic brake valve is in "running" position, MU-2-A valve in lead position, and pilot cutoff valve placed in "IN" position.
- 2. Independent brake valve handle in "full service" position.
- 3. Control and/or fuel pump switches in the "ON" position (if engine is to be life running) and note that the fuel pump is running.
- Engine Run Switch in the "ON" position and the Isolation Switch in the "RUN" position (if engine is to be left running) in order that alarm system will be effective.
- 5. Generator Field Switch in the "OFF" position.
- Throttle in "IDLE" position and reverser handle is removed from the controller.
- Close cab doors and windows.
- 8. If trouble is noted with cooling, lubricating, or fuel systems, or mechanical defects; such that damage might occur while locomotive is unattended, the engines should be shut down. If shut down during freezing weather, the cooling water system must be drained, check fluid levels.
- 9. If engine is to be shut down (resulting in eventual loss of air) hand brake must be applied and/or wheels blocked with chains or other means; however, as local conditions dictate hand brakes should be applied in accordance with bulletin instructions issued by the Superintendent.
- 10. All trainline air hose cutout cocks at uncoupled ends "CLOSED".

NOTE: The above instructions pertain to a single unit only. If more than one unit is left unattended in a consist, the trailing unit or units should be left in Trail Position (as per instructions issued for operating units in multiple).

1211. Switch lists given to switching crews will plainly indicate all of the cars containing "EXPLOSIVES", "FLAMMABLE POISONOUS GAS", "POISONOUS GAS", "RADIOACTIVE MATERIAL", or "FLAMMABLE COMPRESSED GAS."

Cars (including TOFC) loaded with "EXPLOSIVES", "FLAMMABLE POISONOUS GAS", "POISONOUS GAS", "FLAMMABLE COMPRESSED GAS", or "RADIOACTIVE MATERIAL" shall not be cut off while in motion. No car moving under its own motion shall be allowed to strike any car loaded with "EXPLOSIVES", "FLAMMABLE POISONOUS GAS", "POISONOUS GAS", "FLAMMABLE COMPRESSED GAS", or "RADIOACTIVE MATERIAL," nor shall any such car be coupled into with more force than is necessary to complete the coupling.

1212: The following will apply to tank cars loaded with Hydrocyanic Acid (HCN), or an empty HCN Tank Car.

HAZARDS:

HCN is extremely hazardous by inhalation, by contact with the skin, and by ingestion. Exposure to excessive concentration of vapor may result in instantaneous loss of consciousness and death without warning. In the event of a spill or leak of the liquid material, the area should be roped off and warning signs posted until decontamination has been completed by trained personnel. Although HCN has a characteristic sweetish odor, like bitter almond, its toxic action at hazardous concentrations is so rapid that it is of no value as a warning.

SPECIAL PRECAUTIONS:

In the event of a derailment, or other suspected leakage of an HCN tank car, the wind direction should be determined before an approach to the car is made, and the car should be approached from the upwind side. All persons should be kept away from the car. Police and fire-fighting forces should be instructed in the hazards of the lading. If the car is actually involved in a fire or if it is burning at the dome or from any other possible leak, it should be permitted to continue burning. If the car is not actually involved in a fire, IT MUST BE LEFT ALONE PENDING THE SHIPPER'S INSTRUCTIONS. A derailed HCN tank car shall not be rerailed, rigged for hoisting by crane, or other work done on it excepting as instructed by the shipper. It is most important that no flame cutting, welding or other hot work be performed on the car until the shipper's authorization is given by his representative at the scene.

NOTIFICATION:

800-424-9300

In the event of wreck, derailment, leakage, or other problem involving a HCN tank car, call the following number:

CHEMTREC

SWITCHING:

Both loaded and empty HCN cars shall not be cut off while in motion. No car moving under its own momentum shall be allowed to strike either a loaded or empty HCN car.

1213: Each car placed in train where personnel are not on duty for the primary purpose of inspecting freight cars may be moved after receiving safety inspection in accordance with the following standards:

- 1. A freight car with any defect that makes it unsafe for movements shall be corrected or set out of train.
- 2. No part of the freight car nor anything attached to the car may be hanging low enough to foul a road crossing or track structure.
- 3. Open top loads including trailers and containers on flat cars must be safely loaded.
- Where width or height appears close to clearance lines it must be known that the movement has been cleared with the proper authority.
- 5. Freight cars carrying bad order tags that are safe for movement, may be taken in train to the point where repairs are to be made.

SPECIAL INSTRUCTIONS

ADJUSTED TONNAGE RULES AND RATINGS

- 1. The tonnage ratings shown herein include the adjustment factor.

When the sum of the gross weight of all cars plus adjustment factor equals the tonnage rating for the district, the locomotive has its full rating.

- 3. Conductors shall show tonnage in spaces provided therefor on wheel reports.
- 4. When dead locomotives are hauled in trains the adjustment factor should be added for each 35 tons of weight of locomotive.
