Eastward trains must stop at Sanford and westward trains at Oil City and make standing air brake tests as provided in form MP 141 Rule 29. Trains must not leave Sanford or Oil City to descend to Canadian River unless 85% of all air brakes are operative, retainers turned in accordance with Rule 52 of MP 141, locomotive supplied with sand and sufficient number of hand brakes applied to insure safety. Cars must not be shoved down these descending grades unless a sufficient number of hand brakes have been set to control the movement of every car. After descending maximum grades—stop—turn down retainers—carefully inspect wheels and brake rigging.

Should trains stall in ascending grades to Sanford or Oil City they are prohibited from backing down to make a run for the hill.

Westward trains leave rear portion of train between switches, Antelope, when possible and line west switch for siding while doubling to Sanford but whenever rear of train does not clear east end of Antelope siding, set derail on west end Antelope siding in derailing position—in addition to lining west switch for siding. Normal position of Antelope derail is open and locked when not in use as provided above.
